COLMAR BELTING INTRODUCES REVOLUTIONARY NEW SUPERIOR CHEVRON WING PULLEY

Just LOOK at these four life extending benefits:

1: Dispelling Material:

Chevron pulley wings are V-Shaped to deflect material from becoming entrapped >>> better than standard wings

2: Reduced Wing Bending:

The V-shaped wings deflect fugitive material out and away, making it difficult to get rocks wedged between wings & belt causing wing tipping and belt damage.

3: Extends Life of Conveyor Belt:

Less material entrapment that punctures belt.

Significantly on pulley's wings being in constant contact with the belt. (Testing by Fenner Dunlop)

4: QUIET:

It's like comparing a jet engine to a vacuum.

A standard wing pulley averages 120 db while the Chevron Wing pulley is only 70 db.
